

This 5" bass and mid frequencies loudspeaker has been designed to provide a smooth, flat and wide frequency response. It features a polypropylene cone, rubber surround and special design magnet system, including a copper ring on the pole piece to achieve low harmonic distortion and high efficiency. This model is especially well suited for use in small bass-reflex cabinets for high quality monitor applications.

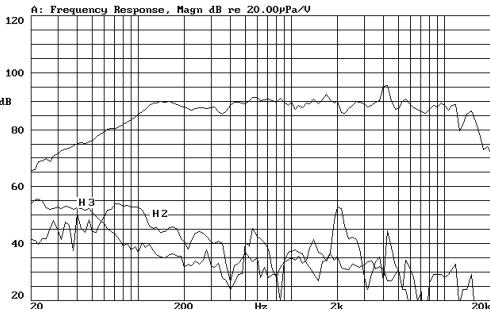

Modelo de 5" con unas características exclusivas para alta fidelidad: membrana de polipropileno y suspensión de goma de gran elongación, chasis de aluminio fundido y estructura magnética de gran tamaño. El resultado son unos bajos de gran impacto, y unos medios nítidos y naturales para recintos de tipo bass-reflex o herméticos.

NOTES

*The power capacity corresponds to the RMS maximum value that can dissipate the loudspeaker when a sinus signal is applied for a period of at least two hours.

Program power is defined as the transducer's ability to handle normal music program material.

** T-S parameters are measured after an exercise period using a preconditioning power test, using a velocity-current laser transducer, and will reflect the long term parameters, once the loudspeaker has been working for a short period of time.

NOTAS

*La potencia admisible corresponde a la máxima potencia RMS que puede disipar el altavoz durante al menos dos horas, cuando se le aplica una señal senoidal determinada.

Por potencia programa se entiende la capacidad del altavoz en el manejo de señales transitorias, como será el proporcionado por el contenido de un pasaje musical normal.

** Los parámetros T-S han sido medidos después de un período de fatiga y estabilización de las suspeniones, mediante transductor láser de velocidad-corriente, y son el reflejo de los parámetros a largo plazo del altavoz, una vez éste haya sido instalado y haya trabajado en un corto espacio de tiempo.
